MILTON BERLE

The Birth of Wrought Iron

BEGINNINGS

Wrought iron is tough, malleable ductile, corrosion-resistant and easily welded.

Historically, a modest amount of wrought iron was refined into steel, which was used mainly to produce swords, cutlery, chisels, axes and other edged tools as well as springs and files. The demand for wrought iron reached its peak in the 1860s, being in high demand for ironclad warships and railway use.

WROUGHT IRON SHOP HAS BEEN SUCCESSFULLY TRADING SINCE 2000 AND HAS DEVELOPED INTO THE PREMIER PROVIDER OF WORLD CLASS ENTRANCE DOORS IN AUSTRALIA.

We have designed and produced hundreds of different door styles. The birth of our Main Collection is the result of increased popularity and demand of various door styles from our customers. Created in the factory production line, Wrought Iron Shop doors are made faster, more efficiently and under much higher quality control.

BALL-BEARING HINGES

STANDARD HINGE

Standard, or plain bearing, hinges have barrels that are broken down into two, three or five connecting sections. The sections, known as knuckles, interlock like teeth to wrap around the hinge pin and connect the leaves. There is no buffer between each knuckle of the barrel. This tends to wear the hinge down over time as the sections grind against one another. Plain bearing hinges are almost always noisy or squeaky, even on lightweight doors

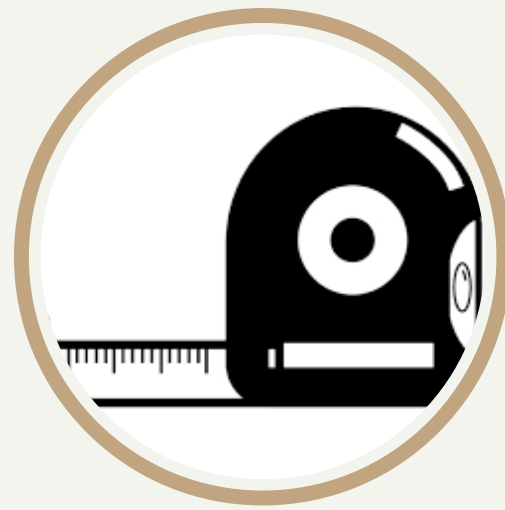

HINGES

BALL-BEARING HINGE

Ball bearing hinges may also have two, three or five knuckles. They differ from plain bearing hinges in that they have a steel ball bearing, or buffer, in between the knuckles. Standard weight ball bearing hinges have bearings only at the top and bottom knuckles, so a five-knuckle hinge would have two bearings. Heavy-duty ball bearing hinges have bearings between every knuckle. These units tend to be durable, better performing and less noisy than standard hinges.

COMMON QUESTIONS

Do they need to be maintained like timber door?

No, unlike a timber door, there is no chance of your iron door moving or warping due to weather and temperature changes. Timber doors need to be constantly maintained. There is no maintenance required with an iron door.

COMMON QUESTIONS

Do the glass panels open?

Yes, all doors have opening glass panels to let the fresh air into your home. All glass is double glazed and toughened to an 18mm slab size. We offer up to 18 different types of glass options.

COMMON QUESTIONS

How easy is installation?

We have instructions and an installation video on the website. It will takes 5-6 hours to fit your door.
Carpenters or builders can fit them as well.

Our Happy Customer

VIKKI & ERIC

We installed the door on the weekend and it looks FANTASTIC !!

Thanks again Wrought Iron Shop you have been great to deal with which we really appreciate.

ANNA

We have been renovating our 1937 house for three years and Wrought Iron Shop has by far been the most high-end, organised, diligent and honest company we have used.

SHAUN & ANITA

Thanks Wrought Iron Shop – our Wrought Iron Doors look fabulous. They are the most STUNNING feature of our new home. Quality product supplied by a quality company. We are so glad that we chose your entry doors.

JOHN

Our Iron Doors are great. Thanks to Chris and his team for their quality and friendly service. These doors add enormous value to our home. We already have people knocking on our door and asking where the WROUGHT IRON SHOP is located.
